

With chemo you'd have to destroy all of this, just to destroy that.

Chemotherapy and radiation destroy cancer cells. Unfortunately, they also destroy normal, healthy cells in the process. Pretty ridiculous. If your cancer is in your lung, why should your hair, throat, and stomach lining take a scorching, too? Ask your oncologist about immunotherapy, a treatment that uses your own immune system to attack only the cancer cells.

Kill your cancer. Not your body. NIVO

A misty forest scene with sunlight filtering through the trees, creating a soft, ethereal atmosphere. The trees are tall and thin, with green foliage. The ground is covered in grass and small plants. A thin white line starts from the top right of the text and extends diagonally across the forest.

With chemo you'd have to remove all of this, just to remove that.

Chemotherapy and radiation destroy cancer cells. Unfortunately, they also destroy normal, healthy cells in the process. Pretty ridiculous. If your cancer is in your lung, why should your hair, throat, and stomach lining take a scorching, too? Ask your oncologist about immunotherapy, a treatment that uses your own immune system to attack only the cancer cells.

An aerial photograph of the London skyline, showing a dense cluster of skyscrapers and buildings. The Shard is prominent on the right side. A white arrow originates from the text above and points to a specific building in the lower right quadrant of the image.

With chemo you'd have to demolish all of this, just to demolish that.

Chemotherapy and radiation destroy cancer cells. Unfortunately, they also destroy normal, healthy cells in the process. Pretty ridiculous. If your cancer is in your lung, why should your hair, throat, and stomach lining take a scorching, too? Ask your oncologist about immunotherapy, a treatment that uses your own immune system to attack only the cancer cells.
